Part one **About Us**

Founded in 1998, became a public company in 2011

70,000m² banking equipment industrial park

Honored to be in the top ten of Forbes' China Potential Enterprises List' in 2014

3,000 plus staff members

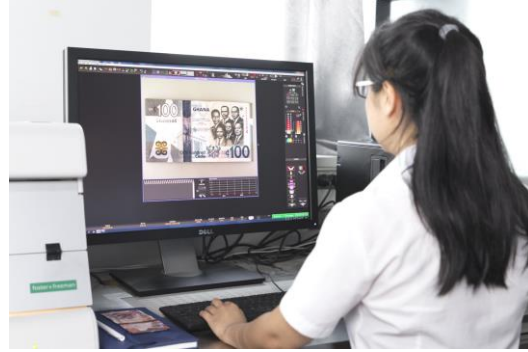

Financial equipment industry park of 100,000m²

75% of market share in China
Exporting the Europe and the rest of the world

Company Portfolio

Technology Innovation

Owned the only National Financial Security and System Equipment Engineering Research Center in the industry in China; and the only state-level postdoctoral research station in the industry.

The first Chinese high-tech financial enterprise passing the test of European Central Bank (ECB).

The company currently has independent intellectual property rights for all core technologies of its products, with a total of 252 patents, including 211 authorized patents, 41 accepted patents, 56 software copyrights and 19 software product registrations.

Certificated ISO9001:2000 Quality Management System ISO 14000.

The first one in the industry to have passed ECB tests for consecutive 7 years
MOU signed with the ECB

Bank Solutions & Cash Center & Vault

Our Products

- ✓ Highest production standard
- ✓ Highest using good materials and best quality
- ✓ Laser precise production facility
- ✓ 75% of the Chinese market share
- ✓ ECB certified products
- ✓ Advanced counterfeit detection
- ✓ Own research and development
- ✓ Secure
- ✓ World-class standards
- ✓ Professional, fully skilled staff
- ✓ The strongest backing support

JL206 Series Advanced Value Counter/Fitness Sorter

Functions

- Counting
- Denomination
- Multi-currency
- Facing and Orientation
- Issue Splitting
- Authentication
- Fitness Sorting: Soil, Holes, Tears, Tape, etc.
- Serial Number Capturing

Models of JL206 series

- JL206V: Without thickness detection.
- JL206F: With mechanical thickness.
- JL206G: With Ultra-sound thickness.

JL303 Banknote Sorter

Functions

- Counting
- Denomination
- Multi-currency
- Facing and Orientation
- Issue Splitting
- Fitness Sorting: Soil ,Holes, Tears ,Tape, etc.
- Serial Number Capturing

Product Highlight

- Modularization multi-sensor recognition technology helps to identify high quality counterfeit banknote. Anti- counterfeit technology and network can be updated quickly.
- Vertical banknote transport structure with roller passage helps to reduce belt wear and loss, add counterfeit detection area. Featured with compact size, light weight and lower noise.
- Automated dust proof door and activated carbon filter ensure a healthy working environment for tellers and customers.
- A fully opened banknote transport makes an easy maintenance and a quick jam recovery.

JL305 Series Advanced Banknote Sorter

Functions

- Counting
- Denomination
- Multi-currency
- Facing and Orientation
- Issue Splitting
- Authentication
- Fitness Sorting: Soil, Holes, Tears, Tape, etc.
- Serial Number Capturing

Product Highlight

- Stackers push-out banknote automatically when banknote quantity reach preset batch value, which improves sorting productivity with 50%. This technology with patent certification to ensure "Non-Stop Operation" .
- Linear and roller banknote transport structure with patent certification and fully open banknote transport, which can be used to deal with damaged, old and small denomination banknote. It makes an easy maintenance and a quick jam removal.
- Modularization multi-sensor recognition technology helps to identity high quality counterfeit banknote and forgery banknote with high-precision.
- Serial number identification and information tracing are available and cash circulation management system is optional.
- The LAN, RS-232 and USB interface extend the connectivity of JL305,which can be connected with external printer and PC for sorting report checking, printing and upgrading, to realize centralized management.

JL8010 Banknote Sorting and Binding Station

Optimum User Experience

- 10-inch HD TFT touch screen, which combined graphic and character on user interface to make the operation more clear and interesting, improve user satisfaction.
- More comfortable sorting operation for user with an operational platform.
- Automatically complete sorting and binding, which reduce working steps and save labor cost.

Detailed Oriented

- Detail orientation appeared everywhere in our products, from a shaft, a belt, a combination to design. We try to make a small item more perfect. Customer satisfaction is our top priority.

Supper Capacity Hopper

- The large capacity hopper holds up to 1, 000 banknotes, then user can keep feeding the notes with non-stop operation.

Advanced Technology Enables A Traceable Banknote

Best combination of internet and serial number capturing technology along with Julong's CMS application, enable serial number of each banknote is able to be recognized, stored and tracked dynamically.

JL8010-42

JL8010-71

JL8000SA Cash Processing System-Single Station

JL8000SA is an all-in-one cash processing system that integrates banknote sorting, binding, banknote transportation, shrink, wrapping and stamping function into one working station, which is an ideal cash processing solution that saved much more working space and greatly enhanced cash processing efficiency.

Modular Design

- Sorting and binding
- Transportation
- Stamping
- Shrink wrapping

JL8000 Multifunctional Intelligent Cash Processing System

JL8000 Multifunctional Cash Processing System is an outstanding product in Julong product collection, Clean lines with elegant appearance and human oriented idea highlight the outstanding utility. Delicate design, ideal layout and combination maximize the sorting efficiency.

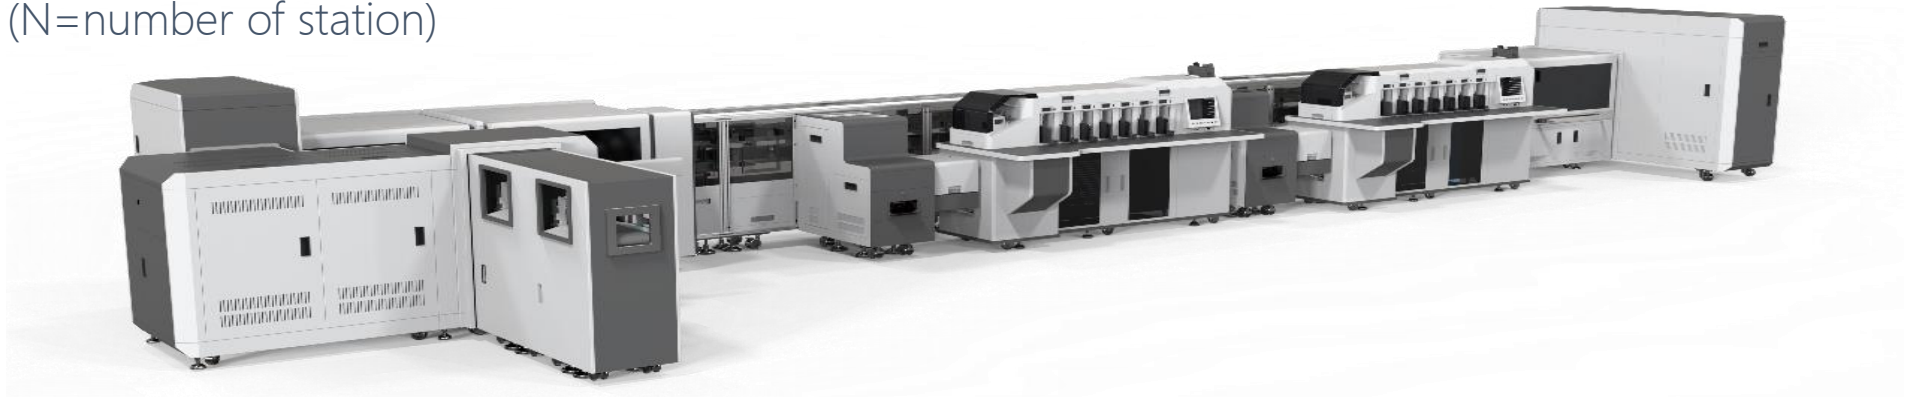

Automatically complete classification and package of ATM, FIT and UNFIT currency, reject the suspect banknote to reject stacker, save human resources, highly improve working efficiency and sorting quality. To monitor the whole process with software system and sort in a closed environment shows more human care and environment protection. JL8000 is considered as an ideal model in cash processing industry, which will terminate the complicate process of currency processing center.

Basic capacity for one working station: 220, 000-340, 000 notes/day

Peak value: 370, 000 notes/day

Average: 280, 000 notes/day

One more station double the productivity. One station needs 2 operators on the basis, Each system needs N+1 operators (N=number of station)

Strapping and Binding Series

JL0301
Automated Bundling Machine

JL109
Fully Automated Strapping Machine

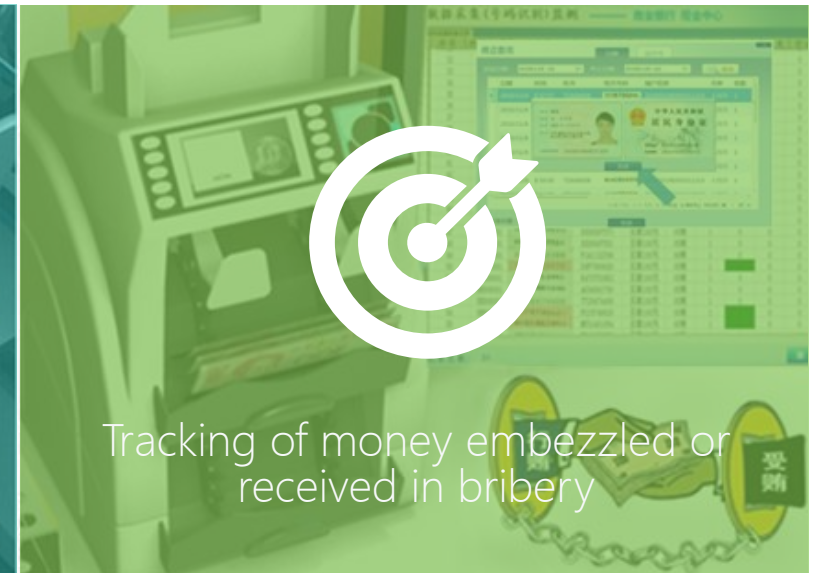

JL112
Automatic Banknote Strapping
Machine

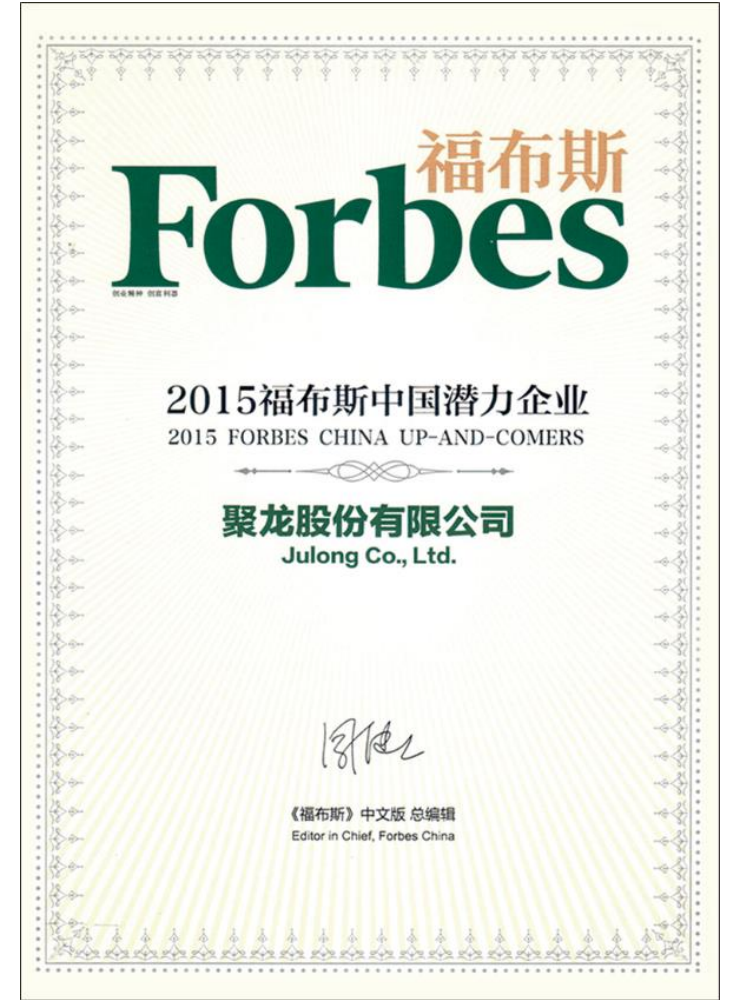

JL116
Banknote Shrink Wrapping Machine

Julong Created: the Cash Circulation Management System

- ❑ Links and tracking each banknote with every transaction of life circulation;
- ❑ Targets a specified banknote serial number through the system for monitoring and reporting;
- ❑ Sets up a connection system between each banknote and account for monitoring the criminal cases;
- ❑ Build a model for collecting, analyzing and predicting the information on banknote circulation and recycling.

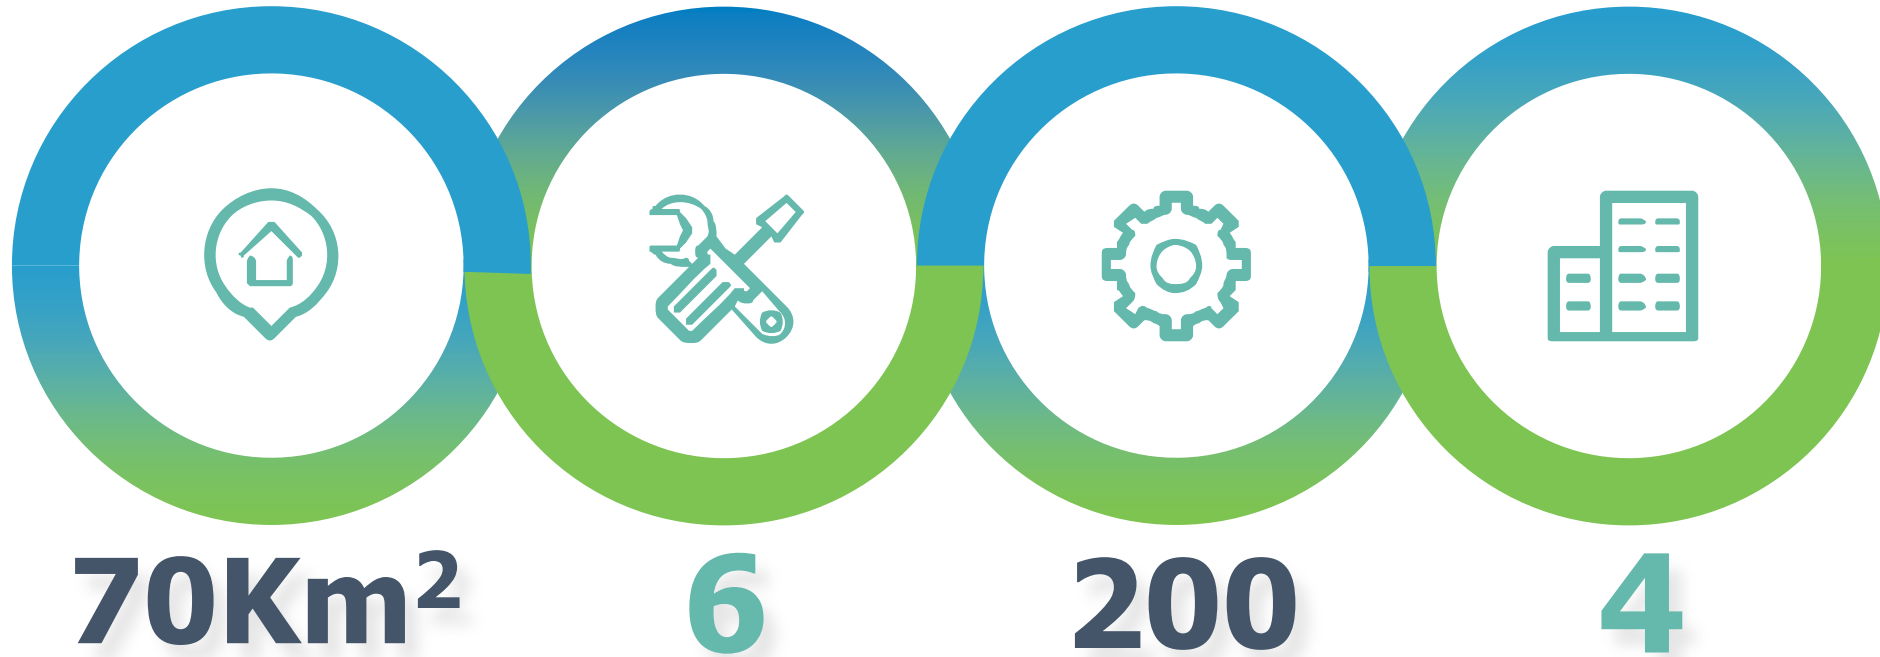

Awards and Certifications

Manufacture

One-stop production applied: integrated processing, assembly, debugging and overall performance test.

70Km²

A 70,000 m² banking equipment industrial park

6

6 automatic assembly lines

200

Over 200 high precision numerical control processing and professional testing units

4

Research Center

JULONG in China

Market Network

- ✓ Sales branches established in 224 cities and 31 provincial capitals across the country
- ✓ Sales and after-sale team with over 2,500 staff
- ✓ Sales network targeting on multiple levels—**Central Bank, Commercial Bank, Private Bank** and other Financial Institutions

Service Capability

- ✓ 255 service stations
- ✓ Field customer service center and call management systems
- ✓ Fast, reliable on-site maintenance
